How to install ReSharper

Creating a student account:

Go here and click "Apply Now" at the bottom of the page.

Use the University Email Address option to apply for a student license.

Follow the directions and create your account.

Installing ReSharper:

Go here and download it.

Run the installer.

Make sure to select ReSharper C++ under Available Products, and Visual Studio integration is checked.

When installation is complete, run Visual Studio.

After a few loading bars, a window will appear asking you to license the ReSharper installation.

To the right of the Use JB Account, there's a plus sign, click it.

Log in with your JB username and password.

All done!

Keep using Visual Studio normally.

Useful new stuff:

Included files that serve no purpose will be grayed out.

If you use something from another file that isn't included, alt-enter will include that file.

The improved IntelliSense is quicker and smarter.

Theres a lot more stuff ReSharper can do, I'll go over that once I create the style guide file for our project.

Warning:

A few shortcuts might have changed, if you try one from Visual Studio and it doesn't work, try checking the toolbar menu or right click for the new shortcut.
